

Amendments to the Claims:

This Listing of Claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-7. (Previously Cancelled)

8. (Currently Amended) A method for manufacturing a glass substrate of an information recording medium by polishing a surface of a glass workpiece with a polishing pad,

wherein the polishing pad comprises a nap layer having an inner layer and an outer layer, wherein the inner layer comprises a plurality of closed cells, and a plurality of pores are formed on the surface of the outer layer, and wherein the sizes of said pores are minute compared to those of said closed cells,

wherein polishing includes a first polishing step for subjecting a surface of the glass workpiece to rough polishing, and a second polishing step for subjecting the surface of the glass workpiece to precision polishing so that the surface is further smoothed,

wherein the polishing pad is used in a second polishing step.

9. (Currently Amended) The method according to claim 8, wherein ~~the number of pores on the~~ said polishing pad is comprises from 400 to 10,000 of said pores in 1 mm².

10. (Currently Amended) The method according to claim 8, wherein ~~the a~~ compression deformation amount of the said polishing pad is 40 to 60 μ m, wherein the compression deformation amount is computed by subtracting the thickness of the polishing pad when compressed to the limit along the thickness from the original thickness.

11. (Currently Amended) The method according to claim 8, wherein ~~the opening sizes of the said pores are~~ have an opening size of from 10 to 60 μ m.

12. (Currently Amended) The method according to claim 8, wherein the glass workpiece is one of a plurality of glass workpieces that are simultaneously polished on the same apparatus by the method according to claim 8, wherein the variation of the thickness of removal layers ~~of among~~ the glass workpieces is equal to or less than 0.2 μ m.

13. (Cancelled herein)
